

# Hydraulic Controller Upgrade

# Hydraulic Controller Upgrade.

## The Smart Solution.

Upgrading the controller in an old hydraulic lift provides you with the benefits gained from a new hydraulic lift without the need to replace the entire lift installation. This system is fully supported with replacement parts and technical data.

### Summary

Most owners of hydraulic lifts wish to ensure that they provide their passengers with the best possible performance and reliability. However, most owners of old hydraulic lifts are experiencing the frustration of increasing shutdown times as the original equipment ages and the availability of replacement parts decreases.

### How it works

Schindler provides you with a high quality and dependable controller system which utilises microprocessor technology to bring you a superior and efficient controller system. It is specifically designed for hydraulic elevators and is based on advanced computer and communications technology together with flexible software design.

### Act Now

Provide your old hydraulic lift with the performance & reliability of a new lift. Contact your local Schindler representative today who can give you more details about the hydraulic lift upgrades to suit your building requirements and budget.
