

Escalator and Moving Walk LED Skirt Lighting

Combining energy efficient solutions and passenger comfort.

LED lighting offers an energy efficient solution to skirt lighting whereby reducing maintenance cost and power consumption whilst maintaining an aesthetically pleasing environment.

Safety

LED lighting operates at low voltages and can be completely water proof.

They are durable in design and are unlikely to break easily with impact damage which with traditional forms of skirt lighting may leave sharp glass particles exposed around the escalator or moving walk skirting and step pallets.

Requirements

Many of the old forms of tube lighting that are featured on escalators and moving walks can be troublesome with high replacement and maintenance costs.

Using LED lighting solutions will provide reduced power consumption and long life expectancy.

Benefits

By upgrading the skirt lighting to LED it can:

- Aesthetically improve the appearance of the lift.
- Reduce the power consumption and heat output.
- Less maintenance of the skirt lighting as there is no filaments.
