

Escalator Skirt Brushes

Safety Commitment.

It's what makes us different.

Escalator and Moving Walk Skirt Brushes help prevent incidents involving a passenger's footwear and clothing becoming lodged between the escalator steps and the side skirting.

Safety

Escalators and Moving Walks present a risk when a user places their shoe or loose clothing close to the skirt panel which can get caught between the step and skirt panel.

Schindler recommend installing skirt brushes to prevent the chance of such incidents occurring including injury to users and damage to equipment.

By installing skirt brushes you will conform to the latest Australian Standard for Escalators and Moving Walks.

Requirements

The Australian Standard AS1735 Part 5 Escalator Code requires:

- Deflector guards are to be fitted to the skirts of the escalator.
- Shall protrude between 30 and 50mm from the skirt panel.
- Shall consist of rigid and flexible part.
- Additionally demarcation lines may be provided running parallel to the skirt.

Benefits

By fitting a skirt brushes to your escalator or moving walk:

- Be compliant with the current lift code.
- Yellow demarcation lines are not required and therefore removing the need for re-painting.
- Reduce the risk of injury to passengers.
- Reduce the risk of costly damage to the equipment
- Possibly reduce Public Risk Insurance.
