

Tread Safety Grip

Tread Safety Grip.

The ultimate anti-slip solution.

Our safety grip solution for escalator and moving walks prevents passengers from slipping on wet and greasy surfaces. It is ideal for escalators and moving walks in outdoor or partially enclosed environments.

Key Advantages

Schindler moves millions of people every day safely and reliably. The key advantages of Schindler's tread safety grip include:

- Superior anti-slip coating technology
- 10 times higher lifespan and durability than other coating solutions
- Increased static and dynamic friction between shoe and pallet
- Low life-cycle cost and high efficiency

Extended Safety

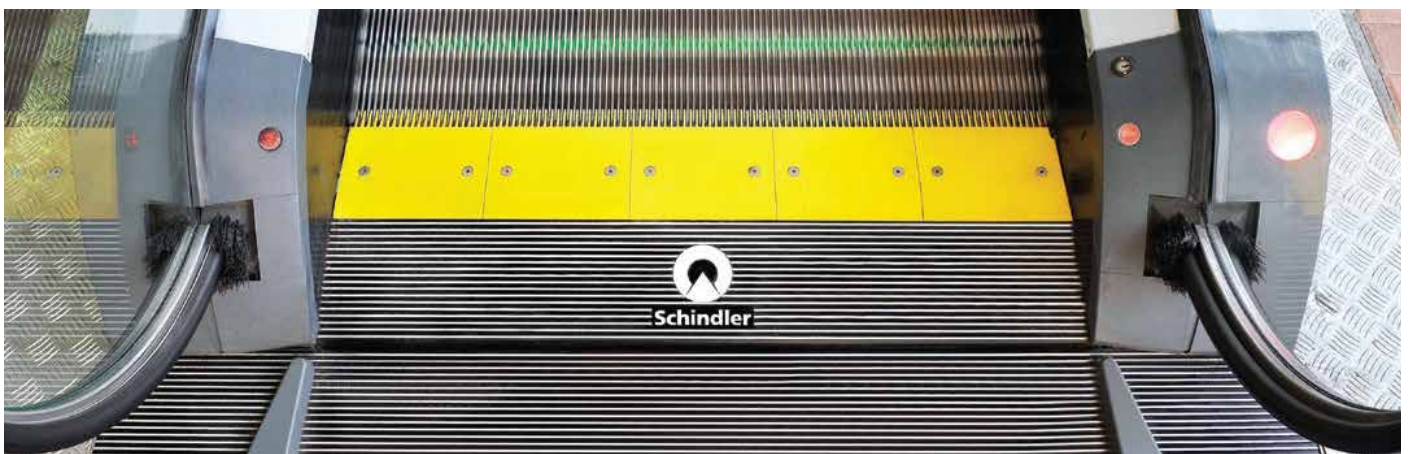

This means less risk of slipping compared to uncoated pallets. Outdoor units are subjected to harsh conditions including rain and moisture.

Additionally many moving walk configurations have them positioned near the entry and exit points of buildings which is where water and dirt builds up during wet weather.

Extreme Durability

The lifespan of the tread safety grip surface is 10 times that of other solutions.

The smooth carbide-coated surface provides greater friction between shoe and pallet. Tread safety grip solution is a secure investment in your moving walk and may also reduce public liability insurance premiums.
