

Supplementary Service

Lift Shaft Cleaning

Additional cleaning of the lift shaft enhances the visual appeal of the building and promotes safety and reliability.

Despite regular maintenance work, your lift shaft can accumulate excess dust and debris over time. This may be from factors such as the location of the lift, the type of usage or the construction of the lift shaft. Additional cleaning improves aesthetics and improves the reliability of the lift.

As cleaning requires safe access to the lift shaft trusting Schindler with this task ensures it is completed as safely and efficiently as possible. Options are available for glass and concrete lift shafts.

Highlights

Safety

- All works including lift access and isolation completed by qualified cleaners
- Prevents potential damage to the building infrastructure from vermin

Aesthetics

- Cleaning from within the lift shaft allows access to the internal glass surface
- Keeps any visible beams, ledges or car top surfaces clear of dust

Reliability

- Removing excess debris from the lift shaft improves the reliability of the lift
- Removes the need to coordinate with multiple suppliers, saving you time

Benefits at a Glance

Improves the aesthetics and reliability of your Lift. No need to coordinate with multiple suppliers as all work is completed by qualified cleaners and scheduled through Schindler

Compatibility

Lift shaft cleaning is available for all types of maintenance contracts
